

3D Improvisation

the three dimension circle
Sound-light-feeling

Vietnamese Day in Copenhagen, Denmark 20th Feb. 2010
and some other cities in Scandinavia in Feb. 2010

3D Improvisation is not only the interactions with the audience but also is the interactions among performers, between the musicians and the photographer. 3D Improvisation express how a simultaneous interaction of musical sounds, visual images, their stories and feeling establish a moment of community; How 'free' the performers in making artistic choices.

3D Improvisation experiences the link between the production of music during the course of a performance and the development of emotional bonds with the photographer through the sound-light. In the same interactive moment, the three dimension circle is thus connected: sound-light-feeling.
